Projects

Title: Wireless Intelligent Billing Trolley For Shopping Mall using RFID and Tracking System

10/2017 – 07/2018 Project

Outline

Wireless intelligent billing trolley using RFID reader and RFID tags for making ease in shopping by generating billing for both sides at customer and cashier for saving time-consuming. There will also a guideline for the customer to make them facilitate by giving instruction on Tablet toward the location of the placed product. Alarming and messaging alert system is also included in the system to solve some other internal problems without creating trouble for the customer and cashier. As expiry product alert trolley filled alert and to press the complete button after ending shopping to generate the bill. The main purpose of creating this project is to get rid of time-consuming queues and to make ease as much as possible for the customer in shopping.
